New Zealand Herald:

Quotes: "... In her book *Hormonal: How Hormones Drive Desire, Shape Relationships And Make Us Wiser*, UCLA Professor of Psychology Martie Haselton points the finger at sexism for the lack of research into testosterone and its close cousins, estrogen and progesterone.

"Hormones elicit stereotypes and people from the academic world are concerned their research will lead to women being confined to girlish stereotypes," says Haselton...

The Guardian (UK, February):

<https://www.theguardian.com/lifeandstyle/2018/feb/25/breaking-the-cycle-women-learning-to-love-their-hormones>

Otago Daily Times (NZ):

<https://www.odt.co.nz/lifestyle/magazine/celebrating-female-hormones>. Quotes: argues that rather than oppressive and damaging, what we've learned about women and hormones is 'empowering'. Rather than a simple story about women losing all rationality around their periods, she sees it as: 'The story of how our hormones guide us through uniquely female life experiences, from feeling desire and pleasure to choosing a mate, having a child (if we would like to), raising a child and transitioning to our post-reproductive years.'"

London Evening Standard:

<https://www.standard.co.uk/lifestyle/books/hormonal-by-martie-haselton-review-a3785321.html>

Quotes: review says, "Hormonal is a good read and an interesting challenge to some contemporary orthodoxies" and quotes you as writing, "Women evolved so that they would not be under strict hormonal control, so that they'd have free will, so that they'd be able to make strategic choices that would benefit their individual lives, if not choices that would perpetuate their genes."

The Times Higher Education:

[today](https://www.timeshighereducation.com/books/editors-blog-bridget-jones-lab-diary-v-hormonal-today) Quotes: "Haselton writes in a style that is lively, popular and confessional, but still scrupulous in its analysis of what her research does and does not show."

Spirituality & Health:

<https://spiritualityhealth.com/reviews/books/2018/02/27/book-review-hormonal> Quotes, "I love her attitude, which is that women absolutely have the power to choose their actions. This is a juicy, funny read—who knew evolution could be so racy?—and easy for a layperson like myself to understand. She quashes long-held myths, such as that women all cycle at the same time if they live together, and completely blows up the idea that women are naturally submissive to males or uninterested in sex. Women's bodies and minds are fascinating, and as Haselton writes, it's high time we 'embrace the intelligence that comes with being hormonal.'"
